**KITEBOARD PADS AND STRAPS**

## ASSEMBLING STRAPS

Follow the instructions from this manual to assemble your footstraps.

PLKB TRX Pro Combo pack (Pads/Straps) V2 grey  
PL100200110 | EAN8720088616987

## STEP 1 - ASSEMBLING THE PLASTIC PARTS

Push the plastic parts through the slot in the base plate. Make sure that the flat surface is outside and they face forward.

### NOTE: TUNING PADS AND STRAPS POSITION

First, at this point, you can choose to position the plastic parts more towards the heel side or towards the toe side of the pads. The location of the plastic parts are based on the shape and size of your feet. Your toes need to pass the 3D edge on the pad to have more grip. The center setting is standard.

Second, when you finished the assembly, you can choose the position of the pads on your board. If you move your pads more towards the heel side of your board, you will get more grip on the rail of your board. However it's then more difficult to ride toe side. Too much to the heel side of your board, means that the water can hit the pads while riding.

Thirdly, You can make your straps smaller and bigger by making both velcro straps smaller or bigger. You can also adjust it towards more pressure on your toes or the top of your foot. And the location of the strap by adjusting the velcro straps separately.

## STEP 2 - ATTACHING THE STRAP

Push the Velcro straps from the inner Velcro through the slot in the plastic parts

## STEP 3 - FIXATING PLASTIC PART

Push the long plastic part into the strap pocket. Pull on the velcro strap and tighten the strap to the plastic part. Fixate the velcro strap.

## STEP 4 - FIXATING OTHER PLASTIC PART

Pull the other velcro straps through the slots in the plastic parts that are already placed through the base plate. Put the long plastic part in the strap pocket and tighten both straps. Now, you can also adjust the straps to fit your foot.

## STEP 4 - FIXATING THE PADS AND STRAPS

Now you can fixate the pads and straps combination on your board with the provided screws. The bolt should screw in easily. Tighten the bolt with the hand and don't overtighten.
